Education

Purdue University

West Lafayette, IN

Bachelor of Science in Computer Engineering, Minor in Mathematics

December 2027

Coursework: Data Structures, Digital System Design, Computer Architecture, Operating Systems, Computer Networks

Experience

Intellicent

May 2026 – Present

Software Engineer Intern

Seattle, WA

- Built **GCP** pipeline with **LLM extraction** & **GPU-accelerated parsing** for millions of healthcare records.
- Developed Go services and sub-100ms **REST APIs** on **Google Kubernetes** for healthcare batch pipelines.
- Designed GCP monitoring dashboards realizing data quality issues, improving pricing model accuracy by **15%**.
- Led development of external data platform pipelines end-to-end and driving requirements in bi-weekly syncs with **Boston Scientific** leadership to align with pricing strategy.

Signal Found - Stealth Startup

Jan 2026 – May 2026

Machine Learning Engineering Intern

San Francisco, CA

- Built a scalable **RAG** framework over a **FAISS** vector DB, generating **15K+** test cases and uncovering **9** previously unknown failure cases in content moderation systems.
- Engineered **200+** uniquely-fingerprinted, sandboxed browser instances on a single **VPS**, coordinated to operate in tandem as one autonomous agent.
- Implemented anti-fingerprinting, per-browser sandboxing, and session isolation, sustaining **95%+** evasion at scale

Caterpillar

Aug 2025 – Jan 2026

Undergraduate Software Engineer

West Lafayette, IN

- Re-architected **7** inventory applications into a unified cloud platform, cutting data retrieval time by **50%**.
- Built low-latency services and **REST APIs** enabling near real-time inventory sync across enterprise systems.
- Built an **LLM-powered** assistant querying inventory status, defects, and delivery schedules across **7** legacy systems, cutting manual lookup time by **70%**.

CERIAS Security Lab – Prof. Zahra Ghodsi

Aug 2025 – Present

Undergraduate Machine Learning Researcher

West Lafayette, IN

- Built scalable **PyTorch** infrastructure for standardized evaluation of adversarial robustness across ML models.
- Implemented and benchmarked adversarial attacks (**FGSM**, **PGD**) and defenses, quantifying the accuracy-robustness tradeoff across model families.
- Engineered distributed ML pipelines with **Spark**, **Kubernetes**, and **Slurm**, optimizing Linux I/O performance.

Projects

Kairo | SwiftUI, Firebase, Firestore, HealthKit, Solidity

- Shipped full-stack **SwiftUI** iOS app with **400+** signups; **Firebase Auth**, **JWT**, and **Firestore** real-time sync.
- Implemented cosine similarity matching over HealthKit biometrics, increasing avg session length by **40%**.
- Built smart contract betting engine with **30%** faster settlement using HealthKit-verified biometric triggers.

BoilerSwap | Next.js, TypeScript, PostgreSQL, Supabase | boilerswap.xyz

- Shipped full stack PWA marketplace with **500+** users, @purdue.edu auth, OAuth, and **JWT** session management.
- Built a route optimization feature to recommend optimal meeting locations, reducing user coordination by **40%**.
- Built Supabase Realtime WebSocket chat with RLS-enforced encryption and multi-conversation support.

POSIX Shell | Custom UNIX Shell | C, Linux, System Calls

- Handles **30** core Bash features with process control & I/O redirection, lowering command dispatch latency by **60%**.
- Supports **500** concurrent jobs with sub-5ms scheduling via fork/exec/waitpid, cutting zombie overhead by **45%**.
- Implemented multi-stage pipelines and signal handling with a recursive-descent parser.

Technical Skills

Languages: C/C++, Python, Go, Java, SQL, JavaScript, Bash, Swift, SystemVerilog, Jenkins

Awards: USACO Silver, Purdue Undergraduate Research Fellowship, 2nd @ BoilerMake Hackathon

Frameworks/Tools: PyTorch, CUDA, Docker, Kubernetes, gRPC, Next.js, Node.js, Supabase, Spark, Git, Linux
