Education

Purdue University West Lafayette, IN
Bachelor of Science in Computer Engineering and Minor in Mathematics *December 2027*

Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Systems, Distributed Systems, AI Native Programmer (Claude Code, Codex)

Experience

Intellicent May 2026 – Aug 2026
Software Engineer Intern *Seattle, WA*

- Built serverless **AWS** pipeline (**Lambda**, **S3**) for **GPU**-accelerated extraction and parsing of **1M+** records.
- Engineered **SQL** data-engineering workflows on **Databricks**, transforming raw records at scale.
- Built observability dashboards for production data pipelines, improving downstream model accuracy by **15%**.
- Developed **Go** microservices and **REST APIs**, streaming records through **Kafka** for high-intake pipelines.

Signal Found - Stealth Startup Jan 2026 – May 2026
Machine Learning Engineering Intern *San Francisco, CA*

- Built a scalable **Python** test framework over a vector database, generating **15K+** automated tests and identifying **9** system failures.
- Orchestrated **200+** concurrent sandboxed browsers on a **Linux** VPS with session, and network isolation.
- Configured **TCP/IP** networking and **IS-IS** routing across isolated environments, sustaining **95%+** evasion.

Caterpillar Aug 2025 – Jan 2026
Undergraduate Software Engineer *West Lafayette, IN*

- Re-architected **7** inventory apps into a unified **cloud-native** platform, cutting data-retrieval time by **50%**.
- Built low-latency **REST APIs** enabling near real-time inventory sync across distributed enterprise systems.
- Built an **LLM-powered** assistant over legacy systems, cutting manual inventory-lookup time by **40–60%**.

TCLS Security Lab – Prof. Zahra Ghodsi Aug 2025 – Present
Undergraduate Machine Learning Researcher *West Lafayette, IN*

- Built **PyTorch/TensorFlow** infrastructure for adversarial-robustness benchmarking on **CUDA GPU**s.
- Benchmarked adversarial attacks (**FGSM**, **PGD**) and defenses, quantifying accuracy–robustness tradeoffs.
- Built distributed **CUDA** pipelines with **Spark**, **Kubernetes**, **Slurm**; tuned **NUMA** affinity and block I/O.

Projects

BoilerSwap | Next.js, TypeScript, PostgreSQL, Supabase | boilerswap.xyz

- Shipped a full-stack **PWA** marketplace with @purdue.edu **OAuth** and **JWT** sessions, scaling to real users.
- Built a route-optimization service recommending optimal meet locations, cutting user coordination by **30%**.

Embedded Systems at Purdue | Autonomous Drone | C/C++, STM32, Pixhawk, ROS2, OpenCV

- Developed real-time firmware in **C/C++** on a **Pixhawk** (**STM32**) flight controller for an autonomous drone.
- Integrated sensor/control data across **ROS2** nodes, bridging controller and companion computer via MAVLink.

Technical Skills

Languages: Python, Java, Go, C/C++, CUDA, JavaScript, TypeScript, SQL, Bash, Swift
Cloud & DevOps: Docker, Kubernetes, AWS (Lambda, S3), CI/CD (Jenkins), Git, Linux, REST APIs
Frameworks & Tools: React, Next.js, Node.js, Databricks, Spark, PostgreSQL
ML & AI: PyTorch, TensorFlow, scikit-learn, Hugging Face, LangChain, RAG, LLMs, Generative AI
Honors: Purdue Undergraduate Research Fellowship, Purdue Undergraduate ECE Scholarship
